

## COVID-19 Updates to Analog Customers

Dear Valued Customer,

We are happy to announce that we will resume the support for analog transmission of EEG testing in your facility effective June 1, 2020. Thank you for your patience as we work through the challenges that COVID-19 has presented to our business.

Telemedx is still working to transition all analog customers over to a digital platform and will be ending our analog services for good on August 1, 2020.

All customers that have committed to switch over to the digital services will be contacted in the coming weeks to schedule their onsite installation and training.

If you have not committed and you plan on continuing to offer EEG services at your facility, you will need to get the contracts signed and executed to get on the installation schedule.

Please contact us at the information below if you have any questions or concerns.

Sincerely,

*Misty Wilson*
